Defend Your Rooftop
From Grease With
Off The Roof
Protection

Stop Using Old Technology
That Hides Grease Under
Layers of Filters
That Sit On Your Roof

The patent pending Exhaust Fan Interceptor (EFI) is the only product on the market that not only processes rain water, allowing it to escape freely, but facilitates wash water recovery during servicing.

The EFI is a specially designed NFPA96 Compliant receptacle to handle waste oil in order to comply with fire regulations, maintain the integrity of the roof system and protect the storm drain.

Each unit will:

- Prevent 600 gallons of caustic chemicals from entering the storm system per year (Based on a quarterly exhaust cleaning schedule)
- Allow unlimited amounts of rain to escape the fan without flooding grease onto the roof
- Prevent early roof replacement
- Keep your roof and area presentable for fire inspections
- Prevent oil tracking / spreading
- Be Fire Safe
- Digest and handle all the grease you can possibly cook up
- Will capture grease release from exhaust fans - all types of grease and oils will be captured and allow only water to escape
- Will work in all weather conditions

Built to last a lifetime

- Material SX 304 Stainless steel ◦17 Gauge (0.058")
- Oil receptacle capacity 1 gallon (4 liters)
- Liquid Capacity 7.1 gallons (27 liters)
- Maximum Oil capacity before failure 6.1 Gallons (23 liters)
- Each unit delivered includes ◦Adjustable mounting plate (Curb Mount)
 - Deflection plate (universal plumbing to fan)
 - 8 pcs. Self-tapping screws
